## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Guedalia U.S. Patent 6,356,283.

Regarding claim 1, Guedalia discloses a device (figure 1) for viewing Internet content such that a host computer (figure 1, item 10, column 17, lines 25-33) receives information about a web page from outside and renders that information into memory facilitated by the web browser program (figure 1, item 38, column 17, lines 49-67); the color depth of the rendered web page is reduced, the web page is digitally compressed and transmitted (figure 1, items 12, 14, column 17, lines 54-67, and column 18, lines 1-10) to the device where it is decompressed for view by a user; further a web browser open on the device contains fixed buttons and allows for scrolling of the webpage in the window (figure 1, item 22, column 17, 39-61).

Regarding claim 2, Guedalia discloses (column 20, lines 36-57) a device such that the device (figure 4, item 78) enables the user to click on the window and when the user clicks on an area of the window a message is sent to the host computer and the host computer provides a click

down in the same location of the web page (figure 4, item 82), a new web page is loaded, color reduced, compressed (figure 4, items 82 and 84) and sent to the device; all information sent to the device is information of the entire new web page.

Art Unit: 2622

*Conclusion*

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shachar U.S. Patent 5,923,736 discloses a configuration that allows for using HTML and TCP/IP to provide seamless access to Internet-hosted hypertext documents in a device, which requires no computer training or expertise of the user.
